Warm-up Exercise 2:

1. In your opinion, what is the Internet?
   - The Internet is often referred to as the Information Superhighway that connects
     millions of computers across the globe. It moves ideas, data, and information through
     networks.

2. What are the differences between LAN, MAN, and WAN?
   - LAN is local network, it has a smaller scope, used in buildings and campuses, usually
     owned by the same organization as attached devices, has much higher data rates. MAN
     is middle ground between LAN and WAN, used for private or public networks, covers
     larger area and has high speed. WAN is wide area network, spans a large geographical
     area but has slower speed.

3. What is an 😑 URL? LOL an URL
   - A URL is a Uniform Resource Locator. A URL has at least two parts: Protocol (http or
     https) and Domain name (example.com)

4. What are the basic parts of an email?
